

## Mirror 002

Mirror 002 is a made to order design by Archive for Space, a multidisciplinary design practice founded in London by Arabella Maza and Stephen Maginn in 2019. Mirror 002 was designed to explore cutting, bending and polishing as methods of production. As with Archive for Space' table collection an organic form was chosen to juxtapose the metals rigidity. Stainless steel was chosen as the mirror's material due to its purity and ability to be polished to a high mirror finish. The level of polish was carefully developed to ensure the mirror surface was clear yet it retains its feeling of solidity that comes from the use of steel.

Elevation

### Lead Times

Made to order in 8–12 weeks.

### Size

h775mm x w480mm  
h1290mm x w795mm

### Finish and Fixing

Stainless Steel

### Aftercare

See the following page.

## Aftercare and Installation

### Installation

Due to size, weight and nature of this mirror we recommend a professional install team be used. Please always check the substrate of the wall or ceiling and have a professional ensure there is suitable support for the mirror. We recommend white gloves are used during installation to avoid fingerprints and marking of the mirror.

Length of screw and wall plugs etc to be determined by a professional installer based on wall substrate.

### Cleaning

We recommend using a dry microfiber cloth to clean your mirror. Never allow liquids on the mirror as this will cause staining. Clean any finger prints immediately as oil from skin will mark the steel.

### Care

The mirrors are made from stainless steel which can scrape and mark.

Never allow sharp objects close to the mirror. Never allow liquids or finger prints to remain on the exposed metal as this will likely cause stains. Wipe any marks immediately to avoid unwanted stains.
